Definition of the system

Places allows you to save your favorite places and events through a web and mobile interface. You can create multiple maps, share them and locate your favorite places. The system offer the possibility to customize them with pictures, notes and other features.
You can visit maps made by your friends or that were made public by other users.
Places also allows you to find events and places in the near vicinity, and suggests you the shortest way to go there.

Users

**Our system will be used by individuals:**
Every user can visit public maps without having to be logged in. In this case, he has access to public maps but can't comment, nore pin a new location.
If the user is logged in, he can access his maps, his friend's , create and modify them. A logged in user can also add comments on pinned events.
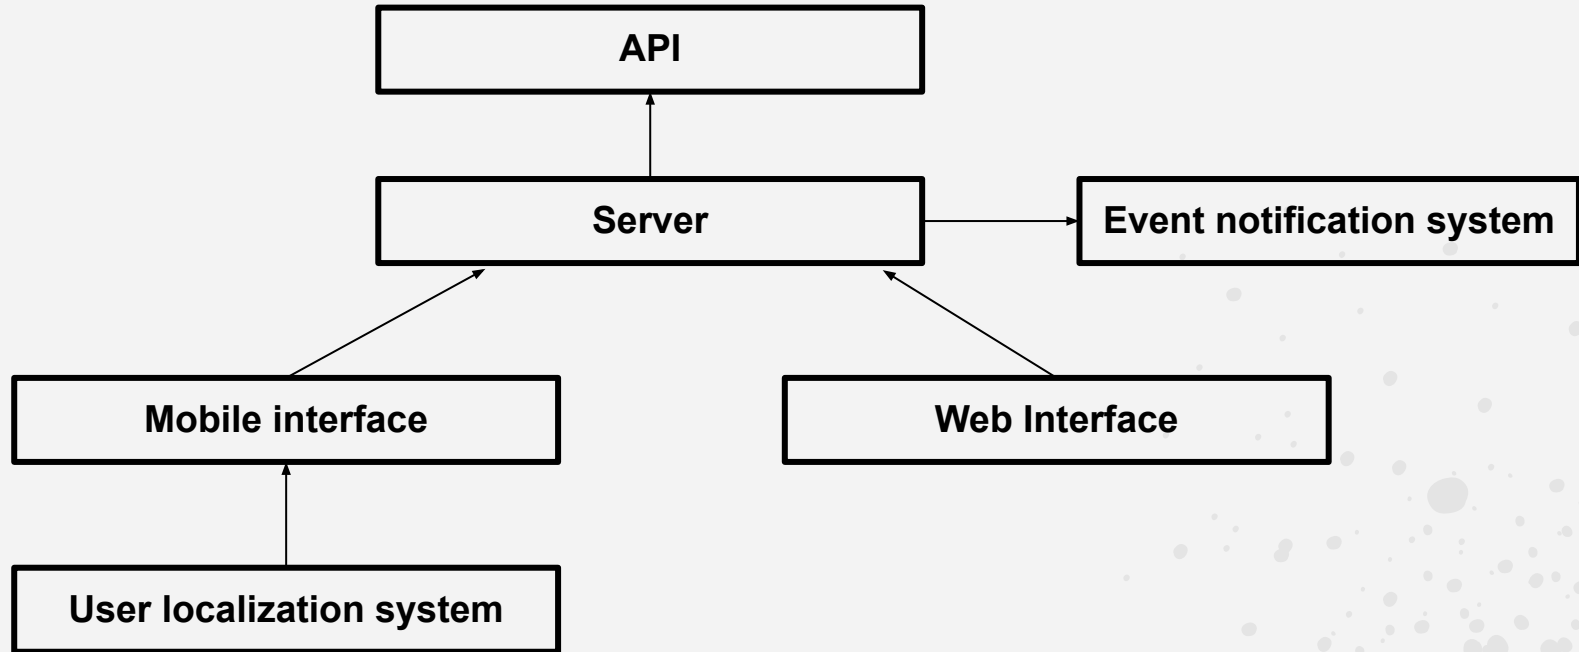

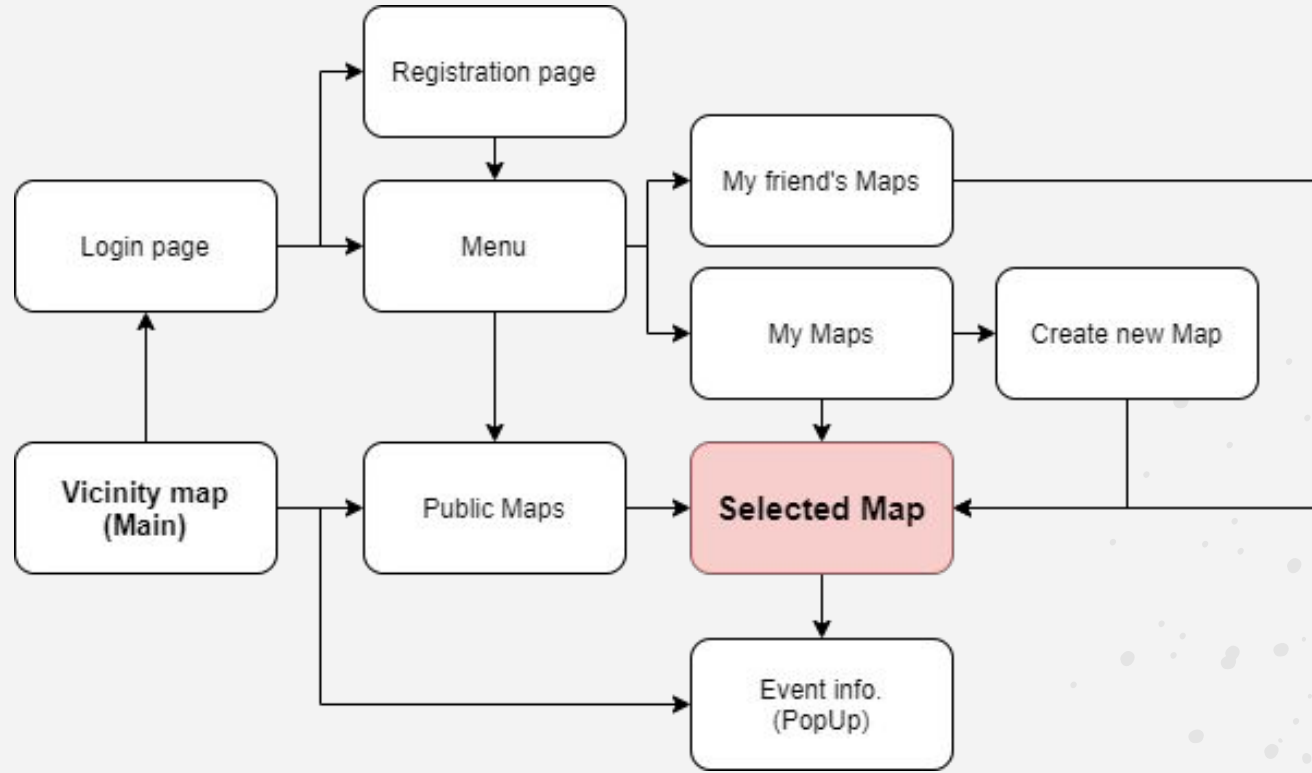

Business object
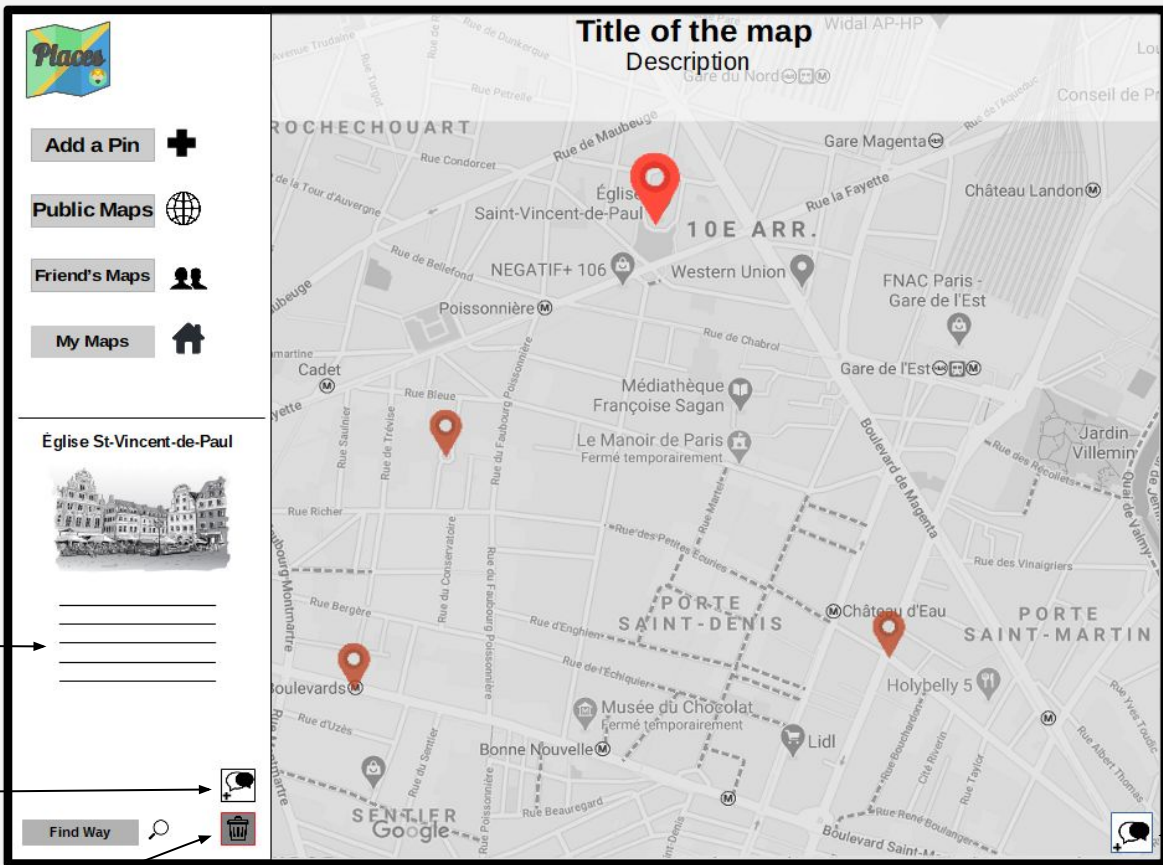

Our business objects and their attributes are:

Events	Pin	Maps	Users
Date and time	Location	Status (public/private)	Location
Pin	Title	Pinned events	Saved maps
	Description	Owner	Favorite places
	Tags	Title	Contacts
		Description	
		Tags
